

Software Requirements Specification (SRS)

Security Incident Mapping (SIM)

1. Introduction

1.1 Purpose

The purpose of the Security Incident Mapping (SIM) system is to provide a web-based platform where students, staff, and landlords can quickly report security incidents occurring on or around campus. The system aims to improve communication between the campus community and security personnel, thereby enhancing campus safety.

1.2 Scope

The SIM system enables users to:

- Report security incidents.
- View reported incidents.
- Access emergency contact information.
- Improve awareness of security issues within the campus community.

1.3 Intended Users

- Students
- Staff
- Landlords
- Security Personnel (Administrator)

2. System Overview

The Security Incident Mapping (SIM) is a simple web application developed to improve campus security. Users can submit reports of incidents such as theft, assault, rape, stabbing, murder, or other crimes. These reports are stored and displayed for monitoring and response by security personnel.

3. Functional Requirements

The system shall:

- Allow users to access the home page.
- Allow users to report security incidents.

- Allow users to enter the location of an incident.
- Allow users to describe the incident.
- Display reported incidents.
- Display emergency contact numbers.
- Notify users that their report has been submitted successfully.

4. Non-Functional Requirements

Performance

- The system should load quickly.
- Report submission should complete within a few seconds.

Reliability

- The system should operate with minimal errors.
- Submitted information should not be lost unexpectedly.

Security

- Only authorized personnel should manage incident records.
- User information should be protected.

Usability

- The interface should be simple and easy to use.
- Navigation should be clear for all users.

Compatibility

- The system should work on modern web browsers such as Chrome, Firefox, Edge, and Safari.

5. Actors

- Student
- Staff
- Landlord
- Security Officer (Administrator)

6. Use Cases

Report Incident

Actor: Student/Staff/Landlord

Description:

The user fills out a form describing a security incident and submits it to the system.

View Incidents

Actor: All Users

Description:

Users can view previously reported incidents.

View Emergency Contacts

Actor: All Users

Description:

Users can access important emergency phone numbers.

7. System Requirements

Hardware

- Computer or Smartphone
- Internet Connection

Software

- Web Browser
- HTML
- CSS
- JavaScript
- GitHub (for project hosting)

8. System Architecture

Users

|

Web Browser

|

SIM Web Application

|

Incident Database (Future Improvement)

9. Benefits

- Faster crime reporting.
- Better communication with security personnel.
- Increased campus security awareness.
- Easy access to emergency contacts.
- Improved incident documentation.

10. Future Improvements

- GPS location mapping.
- Email/SMS notifications.
- User authentication.
- Admin dashboard.
- Integration with campus security services.

11. Conclusion

The Security Incident Mapping (SIM) system provides a simple and effective solution for reporting and monitoring security incidents within the campus community. By enabling timely reporting and improving communication, the system contributes to a safer learning environment.
